Nano ESP32

The Arduino Nano ESP32 is the first ever Arduino board based on a ESP32 microcontroller from [Espressif](#), the **NORA-W106 module** from u-blox®. USB-C® connector, 16 MB (128 Mbit) of Flash, support for MicroPython & Arduino Cloud enabled, it is a very versatile development board.

This board is a perfect entry point to learn MicroPython, dive into it with our free course: [MicroPython 101](#)

The Arduino Nano ESP32 features the NORA-W106, a module with a ESP32-S3 inside. This module supports both Wi-Fi® and Bluetooth® (5.0 and above), making it an ideal device for IoT development. The popular Nano form factor also makes it compatible with many hardware accessories.

[Help](#)

Learn the basics of MicroPython with the Nano ESP 32 and our free MicroPython 101 course.

[MICROPYTHON 101](#)

Arduino Cloud

The Nano ESP32 is compatible with the Arduino Cloud platform. Build IoT projects in just minutes!

[GO TO PLATFORM](#)

Bluetooth®

This board is Bluetooth® enabled allowing you to control peripheral devices and start implementing Bluetooth® Low Energy applications.

ESP32 Platform

The Nano ESP32's Board Package is based on the well-maintained & documented [ESP32 core](#) from Espressif, specifically using the 2.x branch with ESP-IDF version v5.1.4.

[ESP32 DOCUMENTATION](#)

USB-C®

Debugging

The Nano ESP32 supports out-of-the-box debugging with no additional hardware required!

[DOCUMENTATION](#)

ESP-NOW

The Nano ESP32 supports the ESP-NOW protocol developed by Espressif!
