Nano ESP32

The Arduino Nano ESP32 is the first ever Arduino board based on a ESP32 microcontroller from [Espressif](#), the **NORA-W106 module** from u-blox®. USB-C® connector, 16 MB (128 Mbit) of Flash, support for MicroPython & Arduino Cloud enabled, it is a very versatile development board.

This board is a perfect entry point to learn MicroPython, dive into it with our free course:

Arduino Nano ESP32 User Manual

A technical summary of the Nano ESP32 development board, including installation, pin reference, communication ports and microcontroller specifics.

Arduino Nano ESP32 IoT Cloud Setup Guide

A step-by-step guide on how to set up the Nano ESP32 with the Arduino Cloud.

Debugging with the Nano ESP32

Get started with debugging the Arduino Nano ESP32 with the IDE 2.

Device to Device Communication with ESP-NOW

Learn how to use the ESP-NOW protocol to send data between ESP based boards.

Getting Started with Nano ESP32

A step-by-step guide to install the board package needed for the Nano ESP32.

Nano ESP32 Selecting Pin Configuration

Learn how to switch between default & ESP32 pin configurations when programming your board.

SPIFFS Partition on Nano ESP32

Get started with the SPIFFS partition scheme on the Nano ESP32.
