◆ AI Overview

To push a local Git repository to [GitHub](#), follow these steps:

1. Create a New Repository on GitHub

- Sign in to GitHub and click the "+" icon in the upper-right corner, then select [New repository](#).
- Enter a **Repository name** (e.g., `my-project`) and choose your visibility (Public or Private).
- **Important:** Do not initialize the repository with a README, .gitignore, or license if you are pushing existing code, as this can cause merge conflicts.
- Click **Create repository** and copy the **HTTPS** or **SSH** URL provided on the next page. [GitHub Docs](#) +3

2. Initialize and Commit Locally

If you haven't already set up Git in your project folder, run these commands in your terminal:

3. `git commit -m "First commit"` : Records your staged changes to the local repository.
4. `git branch -M main` : Renames your default branch to `main` (GitHub's standard). [GitHub Docs +5](#)

3. Connect Local Repo to GitHub [🔗](#)

Link your local repository to the remote one on GitHub using the URL you copied: [🔗](#)

- `git remote add origin <REMOTE_URL>`
- Replace `<REMOTE_URL>` with your actual repository link (e.g., `https://github.com`).
- Verify the connection with `git remote -v` . [GitHub Docs +3](#)

4. Push to GitHub

Upload your local commits to the remote repository: [🔗](#)

- `git push -u origin main` .
- The `-u` flag sets the "upstream" tracking, allowing you to use just `git push` for future updates. [GitHub Docs +3](#)

Alternative Methods

- **GitHub Desktop:** Use the GitHub Desktop GUI to add your local folder and click the "Publish" button to automate these steps.
